

CASE STUDY - METAL

Summary

Sector

Manufacturing - Metal

Size

Medium-sized company
75 employees

Project

2004 to present
Implementation of an ERP
management solution

Results and benefits

- Integrated data system;
- Flexible and customizable system;
- Marked reduction in the administrative load;
- Better control of operating and administration costs;
- Reduction of order entry errors through the use of a configurator;
- Production of reports from key indicators.

Background

- The company had an outdated system that received information from different sources;
- The system in place no longer suited the company's needs;
- The company's increased production and growth required an integrated view of production as well as improved cost analysis capabilities.

Needs and challenges

- Set up an accounting system that uses a single view to follow every step in the production process (from purchasing merchandise from suppliers to billing clients);
- Generate performance reports based on data from all production sites.

Solutions

- Review business processes;
- Deploy the version 7 SyteLine solution at four production sites;
- Implement a constraint-based product configurator.
