

CASE STUDY – ELECTRICAL TRANSPORT AND DISTRIBUTION

Summary

Sector

Electrical transport and distribution

Size

Large company

65,000 employees worldwide

Sites in 43 countries

Project

2007-2008

Implementation of the SyteLine ERP solution interfaced with SAP financial modules

Results and benefits

- Centralization of data;
- Simplified maintenance of the ERP solution;
- Reduced costs to customize the application;
- Improved collaboration between the company's internal and external players;
- System flexibility and customization through the use of .NET technology.

Background

- The company's goal was to standardize four of its independent sites in Canada;
- The company wanted an ERP that was more flexible and less costly than the SAP solution deployed in the large production sites (over \$250 million) around the world;
- The project entailed implementing the version 7 SyteLine solution at the four Canadian sites and then deploying it around the world.

Needs and challenges

- Reduce the development time and costs required to customize the solution based on the company's specific needs;
- Standardize the processes and applications at the company's four sites.

Solutions

- Perform a full and integrated deployment of the ERP solution at four of the company's sites;
- Develop an interface with the SAP financial module;
- Carry out training and knowledge transfer.
